PROFESSIONAL SUMMARY

QA Automation Engineer (SDET) with 4 .6+ years in UI and API test automation for enterprise web applications, R&D scientific platforms, and distributed microservices. Expert in Selenium WebDriver, Playwright (TypeScript), Rest Assured, Java, and TestNG, with a proven track record of building scalable Hybrid and Page Object Model frameworks from scratch across fintech, banking, and R&D domains. Skilled in CI/CD automation with Jenkins and GitHub Actions, BDD/Cucumber test design, defect management, and end-to-end functional, regression, and smoke test automation that improves test coverage and reduces manual effort across Agile delivery environments.

TECHNICAL SKILLS

Automation: Test Automation, Selenium WebDriver, Selenium Grid, Rest Assured, Playwright (TypeScript/JavaScript)
Language & Frameworks: Java (Core), TypeScript, JavaScript • TestNG, Hybrid Framework, Page Object Model (POM), BDD/Cucumber, Data-Driven Testing
API Testing: Rest Assured, Postman — REST APIs, JSON Schema Validation, Bearer Token Auth, Microservices API Testing
Testing Types: Functional, Regression, Smoke, Sanity & UAT Testing • Cross-Browser Testing • Test Case Design & Execution • Defect Management / Bug Tracking
CI/CD & Tools: Jenkins, GitHub Actions • Apache Maven • Git, GitHub • Docker (Basics) • JIRA (Xray), HP ALM, Bugzilla
Other: SDET, ThreadLocal WebDriver Management, Database Testing (SQL), PLM/R&D Application Testing (Enovia, FIS, PhysChem) • Agile, Scrum, STLC, SDLC

PROFESSIONAL EXPERIENCE

Capgemini — Associate Consultant – QA Automation | Pune, India June 2025 – Nov 2025

Project: Enterprise UI Test Automation — Selenium, Java

- Designed and built a Hybrid automation framework from scratch (POM + Data-Driven) using Selenium WebDriver, Java, TestNG, and Maven for scalable UI automation across sprint deliverables.
- Automated 180+ end-to-end functional and regression test cases covering critical user workflows, from smoke testing through post-release sanity validation.
- Implemented a modular framework architecture with reusable page objects and utility libraries, and integrated test execution into Jenkins and GitHub Actions CI/CD pipelines.
- Conducted automation code reviews, managed defect tracking and triage in JIRA, and mentored junior team members on automation best practices.

Project: Formulation R&D Test Automation — P&G · Playwright, TypeScript Nov 2025- Present

- Automated 165 of 272 regression test scenarios (~61% coverage) for P&G's R&D formulation platforms (FIS, Enovia, PhysChem) using Playwright with TypeScript, following the Page Object Model design pattern, reducing manual regression effort by approximately 60%.
- Built reusable Playwright test suites validating widget-level functionality (FIS, Enovia, PhysChem) and automated report-generation widget checks to ensure data accuracy across formulation workflows.
- Designed a modular POM architecture separating locators, page actions, and test logic to reduce maintenance overhead across R&D application modules.
- Collaborated with cross-functional R&D and engineering teams to translate formulation business logic into automated test scenarios.
- Participated fully in Agile ceremonies — sprint planning, backlog grooming, daily stand-ups, and retrospectives — collaborating closely with cross-functional squads.

Infosys — Automation Test Engineer | Pune, India March 2022 – May 2025

- Designed and built a complete REST API automation framework from scratch using Rest Assured, Java, TestNG, and Maven, covering all microservice endpoints end-to-end.
- Automated 120+ REST API test scenarios including request/response validation, JSON Schema assertions, authentication tokens, headers, and business-logic checks.
- Implemented BDD/Cucumber (Given–When–Then) feature files for behaviour-driven API testing, improving test clarity for both technical and non-technical stakeholders.
- Built data-driven reusable utilities for dynamic payload generation, response parsing, token lifecycle management, and assertion handling.
- Reduced manual API testing effort significantly by automating regression validation of critical services, enabling faster and more reliable release cycles.

KEY PROJECTS

Polaris Edge Discover — FedEx · Rest Assured, TestNG, Maven **Apr 2022 – Mar 2024**
Financial Service — UBS · Selenium Hybrid Framework, Jenkins, Jira **Apr 2024 – May 2025**
Fraud Analytics & Strategy — Barclays · Selenium, Java, GitHub Actions, Jira **June 2025 – Nov 2025**
R&D Formulation Test Automation —P&G Playwright/TypeScript **Nov 2025-Present**

EDUCATION & CERTIFICATIONS

B.E., Chemical Engineering — Madhav Institute of Technology and Science, Gwalior
Certifications: ISTQB Foundation Level • Infosys Certified — Java Developer, Selenium Advance (Java), DevOps Professional, Database & SQL, REST Assured Tester • Infosys Insta Award for exceptional project contribution and delivery.
